

# Additional Virucidal and Bactericidal Efficacy Claims

Effective August 26, 2008, EZ-KILL has additional Virucidal and Bactericidal claims as follows:

<b>Virucidal Activity:</b>	<b>Kill Time:</b>
HBV	2 minutes
HCV	2 minutes
<b>Bactericidal Activity:</b>	
TB	2 minutes

For a disinfectant product to make a claim that it is effective against the above viruses or bacteria, it must have undergone extensive testing to substantiate virucidal or bactericidal efficacy. The product must then be registered as a virucide and/or bactericide with the Environmental Protection Agency, who determines the potential of the product to disinfect hard surfaces contaminated with the associated viruses or bacteria. After passing testing criteria established by the Environmental Protection Agency, a product can make the claim that it is effective against the above viruses or bacteria.
